DRŽAVNI HIDROMETEOROLOŠKI ZAVOD REPUBLIKE HRVATSKE

SEKTOR ZA HIDROLOGIJU

PODRUČJE DRAVE

IZVJEŠTAJ O MJERENJU I OBRADI PODATAKA RAZINE PODZEMNE VODE U 2024. GODINI

Načelnik Sektora za hidrologiju:

Dario Kompar, dipl. ing.

GLAVNI RAVNATELJ:

dr. sc. Ivan Güttler

ZAGREB, 2025.

SADRŽAJ

IZVJEŠTAJ

PRILOZI:

1. Popis opažačkih postaja
2. Situacija piezometara na dravskom području
3. Godišnji pregled razine podzemne vode u 2024. godini

IZVJEŠTAJ

Na dravskom području Državni hidrometeorološki zavod prati razinu podzemne vode na 349 mjernih objekata, raspoređenih u četiri piezometarske mreže. Zajednička piezometarska mreža, koju ravnomjerno financiraju DHMZ, Hrvatske vode i HEP, obuhvaća 162 mjerne točke, od kojih se 133 opaža dvaput tjedno (ponedjeljkom i četvrtkom), dok su na preostalih 29 objekata instalirani limnigrafi podzemne vode. Popis postaja zajedničke piezometarske mreže nalazi se u prilogu 1/1. Piezometarska mreža koju financiraju Hrvatske vode smanjena je za jednu postaju u odnosu na prethodnu godinu te sada obuhvaća 125 opažačkih postaja. Na 113 objekata motrenje se provodi dvaput tjedno, dok su na 12 piezometara instalirani limnigrafi. Bunar B-58 (3035), koji se nalazi u privatnom dvorištu, ukinut je početkom 2024. godine zbog nemogućnosti sklapanja ugovora s dotadašnjom motriteljicom i vlasnicom dvorišta. Popis postaja ove mreže nalazi se u prilogu 1/2. Piezometarska mreža koju financira Hrvatska elektroprivreda vezana je uz postojeće hidroelektrane. Mreža ukupno broji 58 piezometara (HE Varaždin 12, HE Čakovec 28 i HE Dubrava 18), koji su se motrili ponedjeljkom i četvrtkom do 29. travnja 2024. godine. Prekid motrenja stupio je na snagu početkom svibnja, kao rezultat nesklapanja novog ugovora između DHMZ-a i HEP-a. Popis postaja nalazi se u prilogu 1/3. Piezometarska mreža koju financira DHMZ sastoji se od 4 limnigrafske postaje, čiji je popis također dan u prilogu 1/3. Prostorni raspored piezometara prikazan je u prilogu 2, dok su godišnji pregledi razine podzemne vode sadržani u prilogu 3.

Numerička obrada razine podzemne vode sadrži u svom zaglavlju oznaku postaje, šifru postaje, godinu početka rada, godinu obrade, katastarsko ime objekta, koordinatu postaje po Gauss-Krugeru, kotu “0” točke, te kotu terena i kotu donjeg ruba filtra. Dalje slijede razine za godinu obrade izražene u apsolutnim kotama. Za svaki mjesec ispod izmjerenih razina iskazane su najniža (NV) i najviša (VV) razina s danom pojave, te izračunata srednja (SV) razina. Isto tako su za čitavu godinu dane minimalna (NV) i maksimalna (VV) razina s danom pojave, a izračunate su srednja niska (SNV), srednja (SV) i srednja visoka (SVV) razina. Ukoliko podaci za godinu obrade nisu kompletni, ne računaju se srednje razine, a ekstremne razine su određene na temelju nekompletnih podataka. U najdonjem redu navedene su apsolutna minimalna (NNV) i apsolutna maksimalna (VVV) razina registrirana od početka rada postaje, a datum njihove pojave upisan je uz vrijednost razine. Kota donjeg ruba filtra piezometra predstavlja u stvari prirodno dno piezometra, dok

razine podzemne vode izmjerene ispod nje predstavljaju vodu koja je zaostala u taložniku. Program je prilagođen tako da ne izračunava razine podzemne vode koje su registrirane ispod kote donjeg ruba filtra. Mjesta takvih razina podzemne vode u ispisu su označena sa šest zvjezdica, što znači da su za te datume mjerenja izvršena, ali zabilježene razine ne odgovaraju stvarnom stanju.

Ispod numeričke obrade slijedi grafički prikaz kolebanja razine podzemne vode unutar promatrane godine. Nivogram postaje nacrtan je u apsolutnim kotama razina podzemne vode. Ukoliko se razine podzemne vode približuju dnu filtra odnosno padnu ispod njega, kota donjeg ruba filtra prikazuje se na grafikonu crtkanom linijom. Za razliku od numeričke obrade ovdje su iscrtane i razine podzemne vode registrirane ispod te kote, te se tako može pratiti ponašanje vode u taložniku.
