IZVJEŠTAJ O MJERENJU I OBRADI PODATAKA RAZINE PODZEMNE VODE U 2024. GODINI

Načelnik Sektora za hidrologiju:

Dario Kompar, dipl. ing. geol.

GLAVNI RAVNATELJ:

dr. sc. Ivan Güttler

ZAGREB, 2025.

SADRŽAJ

IZVJEŠTAJ

PRILOZI:

1. Popis opažačkih postaja
2. Situacija piezometara na savskom području
3. Godišnji pregled razine podzemne vode u 2024. godini

IZVJEŠTAJ

Na savskom području Državni hidrometeorološki zavod tijekom 2023. godine pratio je razinu podzemne vode na 344 mjernih objekata, raspoređenih u dvije piezometarske mreže. Zajednička piezometarska mreža, koju ravnomjerno financiraju DHMZ i Hrvatske vode, obuhvaća 111 mjernih točaka, od kojih se 79 opaža dvaput tjedno (ponedjeljkom i četvrtkom), dok su na preostalih 32 objekta instalirani limnigrafi podzemne vode. Na piezometarskoj mreži koju financiraju Hrvatske vode, krajem veljače aktiviran je zamjenski piezometar DP-35 (0334) umjesto postaje ČP-14 (0166), koja se nalazi na privatnoj parceli. Razlog ukidanja postaje bio je zahtjev vlasnika posjeda za neisplativo visoku naknadu za korištenje zemljišta radi provođenja mjerenja i održavanja postaje. Postaja K-26 ukinuta je zbog dugotrajnog diskontinuiteta u mjerenjima i nemogućnosti osiguravanja kontinuiranog pristupa, a zamjenska postaja nije aktivirana zbog odluke Hrvatskih voda da za tim nema potrebe. Na zahtjev za izmještanje piezometra, koji su podnijele Hrvatske vode, privremeno je obustavljeno motrenje piezometra NOS–18 (0471) od 13. listopada 2016. godine, jer je svojim položajem onemogućavao izvedbu nasipa. Izvođač će, po završetku građevinskih radova, izgraditi novi piezometar otprilike desetak metara od dotadašnje lokacije, nakon čega će se ponovno uspostaviti opažanje. Piezometarska mreža koju financiraju Hrvatske vode sastoji se od 233 opažačke postaje, pri čemu se na 213 objekata motrenje provodi dvaput tjedno, dok su na 20 piezometara instalirani limnigrafi. Trgovačko društvo VG Vodoopskrba d.o.o. provodi opažanje piezometara na crpilištu Velika Gorica: LG-5 (5182), P-1 (5183), P-3 (5184), P-7 (5185), P-11 (5186), S-1 (5187), S-8 (5189) i SP-3 (5190). Popis postaja ove mreže nalazi se u prilogu 1/2. Prostorni raspored piezometara prikazan je u prilogu 2, dok su godišnji pregledi razine podzemne vode sadržani u prilogu 3.

Numerička obrada razine podzemne vode sadrži u svom zaglavlju oznaku postaje, šifru postaje, godinu početka rada, godinu obrade, katastarsko ime objekta, koordinatu postaje po Gauss-Krugeru, kotu “0” točke, te kotu terena i kotu donjeg ruba filtra. Dalje slijede razine za godinu obrade izražene u apsolutnim kotama. Za svaki mjesec ispod izmjerenih razina iskazane su najniža (NV) i najviša (VV) razina s danom pojave, te izračunata srednja (SV) razina. Isto tako su za čitavu godinu dane minimalna (NV) i maksimalna (VV) razina s danom pojave, a izračunate su srednja niska (SNV), srednja (SV) i srednja visoka (SVV) razina. Ukoliko podaci za godinu obrade nisu kompletni, ne računaju se srednje razine, a ekstremne razine su određene na temelju nekompletnih podataka. U najdonjem redu navedene su apsolutna minimalna (NNV) i apsolutna maksimalna (VVV)

razina registrirana od početka rada postaje, a datum njihove pojave upisan je uz vrijednost razine. Kota donjeg ruba filtra piezometra predstavlja u stvari prirodno dno piezometra, dok razine podzemne vode izmjerene ispod nje predstavljaju vodu koja je zaostala u taložniku. Program je prilagođen tako da ne izračunava razine podzemne vode koje su registrirane ispod kote donjeg ruba filtra. Mjesta takvih razina podzemne vode u ispisu su označena sa šest zvjezdica, što znači da su za te datume mjerenja izvršena, ali zabilježene razine ne odgovaraju stvarnom stanju.

Ispod numeričke obrade slijedi grafički prikaz kolebanja razine podzemne vode unutar promatrane godine. Nivogram postaje nacrtan je u apsolutnim kotama razina podzemne vode. Ukoliko se razine podzemne vode približuju dnu filtra odnosno padnu ispod njega, kota donjeg ruba filtra prikazuje se na grafikonu crtkanom linijom. Za razliku od numeričke obrade ovdje su iscrtane i razine podzemne vode registrirane ispod te kote, te se tako može pratiti ponašanje vode u taložniku.
