UVOD.

Gradski meteorološki opservatorij u Splitu podignut je godine 1926. od gradske općine uz državnu potporu, po osnovi potpisanog, eda se udovolji davno osjećanoj potrebi ustanovljenja bolje uređene motrionice vremena na jugoslavenskoj jadranskoj obali.

Zavod koji ima da za sada odgovara čednijim zahtjevima, nalazi se u maloj zgradi, koja je za to naročito sagrađena na prvom vrhu brežuljka Marjana, 125 m nad morem.

Smeštaj ove stanice odgovara svim zahtjevima koji se traže od moderne motrionice. Osim što je opservatorij na jugoslavenskom primorju centrično situiran, ima pored toga uprav i dominantan položaj.

Geografske koordinate opservatorija

$$\varphi = 43^{\circ} 31' \text{ N}, \lambda = 16^{\circ} 26' \text{ E Gr.}$$

Nivelirana visina otvorenog kraka normalnoga barometra jest 128.00 m nad morem.

Prijamni dio anemografa je svim vjetrovima slobodno izložen.

Opservatorij je opskrbljen s dvjema garniturama instrumenata za mjerenje temperature i vlage. Jedna je garnitura, koja se sastoji od psihrometra, ekstremnih termometara, higrometra (Koppe), termografa i higrografa (mali modeli Fuess), smještena u visini od 2 m iznad tla u velikoj kolibi na dvostruke jalousie a druga na visini od 7 m nad zemljom, na sjevernoj strani zgrade kod prozora, na potpuno otvorenom zraku, zaštićena od sunca i kiše, te sastoji od psihrometra, termografa i higrografa (veliki tjedni modeli Fuess). Podaci su u ovom izvještaju uzeti prama posmatranju na instrumentima u kolibi. Svi su termometri opservatorija bili uspoređeni s normalnim termometrom i ne trebaju korekcije.

Za mjerenje tlaka zraka posjeduje opservatorij:

1 normalni barometar Wild-Fuess br. 858,

1 aneroidni barograf Fuess, mali model i

1 anerodni barograf na uteg Richard, srednji model (skala: 1 mm žive = 3 mm).

Za mjerenje vjetra:

1 Wildova vjetrulja i

1 električno registrirajući anemograf Sprung-Fuess za brzinu i pravac vjetra.

Za mjerenje kiše služi:

1 ombrometar i

1 ombrograf Hellmann.

Za mjerenje sjanja sunca služi:

1 heliograf Campbell-Stokes.

Opservatorij je snabdjeven s prijamnom radio-stanicom i električnom urom (Leroy).

Za mjerenje temperature i kiše u gradu namještena je odnosna stanica na periferiji grada na visini od 10 m a snabdjevena je termometrom i kišomjerom.

Osoblje opservatorija sastoji se od upravitelja i dvaju činovnika. Gradska stanica ima dva posmatrača.

Opservatorij izdava dnevno vremenski izvještaj, koji se telegrafski odašilje svim jugoslavenskim lukama na Jadranu i nekim gradovima u unutrašnjosti, dok se radio-stanicom Beograd-Rakovica na valu 3488 m, pozivnim znakom UNB, a pod šifrom 718, šalju u svijet sinoptička terminska motrenja skupa s onima drugih jugoslavenskih stanica u 0815, 1415 i 2015 sati.

Opservatorij daje dnevno splitskoj luci podnevni signal.

Osim toga objavljuje opservatorij dnevno u listovima svoj izvještaj.

Stupajući ova mlada institucija u tjesniju vezu s meteorološkim i srodnim ustanovama, kojima šalje svoj izvještaj, izrazuje želju za redovitu izmjenu publikacija.

SPLIT, u jeseni 1929.

Ing. E. Marki,
upravitelj

INTRODUCTION.

L'observatoire Météorologique de la ville de Split a été fondé en 1926. — par la mairie avec une subvention gouvernementale, d'après le plan du soussigné, aux fins de satisfaire au besoin depuis longtemps ressenti de l'établissement d'un observatoire mieux agencé sur la côte Adriatique yougoslave.

L'établissement, qui pour le moment doit répondre à de modestes exigences, est situé dans une petite construction, élevée à cet effet sur le premier sommet du coteau Marjan à 125 m au-dessus de la mer.

La position de cette station répond à toutes les exigences requises par un observatoire moderne. Non seulement il est situé au centre du littoral yougoslave, mais il occupe en outre une position réellement dominante.

Les coordonnées géographiques de l'observatoire:

$$\varphi = 43^{\circ} 31' \text{ N}, \lambda = 16^{\circ} 26' \text{ E Gr.}$$

L'hauteur nivelée de la branche ouverte du baromètre normal est de 128.00 m au dessus de la mer.

Le moulinet de l'anémographe est situé de façon, qu'il est exposé à tous les vents.

L'observatoire est fourni de deux garnitures d'instruments pour mesurer la température et l'humidité. L'une, qui consiste de psychromètre, thermomètres extrêmes, hygromètre (Koppe), thermographe et hygrographe (petit modèles Fuess) est placée à une hauteur de 2 m au dessus du sol dans la grande hutte à doubles jalousies; la seconde à une hauteur de 7 m du sol, du côté septentrional de l'établissement près de la fenêtre, tout à fait en plein air, à l'abri du soleil et de la pluie et consiste en psychomètre, thermographe et hygrographe (grands modèles hebdomadaires Fuess). Les données contenues dans ce rapport sont prises d'après les observations sur les instruments dans la hutte. Tous les thermomètres de l'observatoire ont été comparés aux thermomètres normaux et n'exigent pas de correction.

Pour mesurer la pression de l'air l'observatoire possède

1 baromètre normal Wild-Fuess No 858,

1 barographe anéroïde Fuess, petit modèle et

1 barographe anéroïde à poids, Richard modèle moyen (Echelle: 1 mm mercure = 3 mm).

Pour mesurer le vent il y a:

1 girouette Wild et

1 anémographe enregistreur électrique Sprung-Fuess pour la vitesse et la direction du vent.

Pour mesurer la pluie on se sert de:

1 ombromètre et

1 ombrographe Hellmann.

Pour mesurer la durée d'insolation:

1 héliographe Campbell-Stokes.

L'observatoire est fourni d'une station de réception radio ainsi que d'une pendule électrique (Leroy).

Pour mesurer la température et la pluie on a installé dans la périphérie de la ville une station conforme à une hauteur de 10 m, pourvue de thermomètre et d'ombromètre.

Le personnel de l'observatoire se compose du directeur et de deux employés. La station de la ville a deux observateurs.

L'observatoire publie journallement un bulletin météorologique. Celui-ci est transmis télégraphiquement à tous les ports yougoslaves sur l'Adriatique et à certaines villes de l'intérieur, pendant que par la radio-station Beograd-Rakovica sur l'onde 3488 m, signal d'appel UNB sous le chiffre 718 on transmet au monde les observations synoptiques ensemble avec celles des autres stations yougoslaves.

L'observatoire donne quotidiennement au port de Split le signal horaire de midi.

Au surplus l'observatoire publie chaque jour son bulletin dans les journaux.

En se mettant étroitement en relation avec les institutions météorologiques ou analogues à celles-ci il exprime le désir de voir s'entamer l'échange réciproque régulier des publications.

SPLIT, automne 1929.

Ing. E. Marki,
Directeur

EINLEITUNG.

Das städtische meteorologische Observatorium in Split wurde nach Entwurf des Unterzeichneten von der Stadtgemeinde mit Unterstützung des Staates im Jahre 1926. errichtet, um den lang empfundenen Mangel an einer besser eingerichteten Wetterbeobachtungsstelle and der jugoslavischen Adria-Küste zu decken.

Das Institut, welches vorläufig bescheidenen Anforderungen zu entsprechen hat, befindet sich in einem dem Zwecke entsprechenden kleinen Gebäude, das auf dem ersten Hügel des Marjans in der Seehöhe von 125 m errichtet ist.

Die Lage dieser Beobachtungsstelle entspricht allen Anforderungen welche an eine moderne Wetterwarte zu stellen sind. Ausser durch die zentrale Lage an der jugoslavischen Küste, zeichnet sich dieselbe auch durch eine dominierende Stellung aus.

Geographische Koordinaten des observatoriums:

$$\varphi = 43^{\circ} 31' N, \lambda = 16^{\circ} 26' \text{ ö Gr.}$$

Die nivellierte Seehöhe des offenen Schenkels des Normalbarometers ist 128.00 m.

Das Schalenkreuz des Anemographes ist allen Winden frei ausgesetzt.

Das Observatorium ist mit zwei Garnituren von Instrumenten zur Messung von Temperatur und Feuchtigkeit versehen. Die eine Garnitur, bestehend aus Psychrometer, Extremthermometern, Hygrometer (Koppe), Thermograph und Hygrograph (kleine Modelle von Fuess) ist in einer grossen Doppeljalousie-Hütte in 2 m Höhe über dem Boden aufgestellt; die andere, 7 m über dem Boden hoch, an der Nordseite des Hauses vor dem Fenster, vollkommen der freien Luft ausgesetzt, von Sonnenschein und Regen geschützt aufgestellt, besteht aus Psychrometer, Thermograph, und Hygrograph (grosse Wochen-Modelle von Fuess). Die in diesem Berichte enthaltenen Daten sind den Beobachtungen der Instrumente in der Jalousie-Hütte entnommen.

Sämtliche Thermometer des Observatoriums sind mit dem Normalthermometer verglichen worden und bedürfen keiner Korrektur.

Für den Luftdruck besitzt das Observatorium;

- 1 Normalbarometer Wild-Fuess No 858,
- 1 Aneroid-Barograph Fuess, kleines Modell, und
- 1 Aneroid-Gewichtsbarograph Richard, mittleres Modell (Ska'a: 1 mm Quecksilber = 3 mm).

Für Windmessung sind vorhanden:

- 1 Wild'sche Windfahne und
- 1 elektrisch registrierendes Anemograph Sprung Fuess, für Richtung und Geschwindigkeit

des Windes.

Zur Niederschlagsmessung dienen:

- 1 Regenschirm und
- 1 Ombrograph Hellmann.

Zur Messung des Sonnenscheines dient:

- 1 Heliograph Campbell-Stokes.

Das Observatorium ist mit einer Radio-Empfangsstation versehen und besitzt eine elektrische Pendulette von Leroy.

Für die Messung von Temperatur und Niederschlag in der Stadt, ist eine entsprechende Station dortselbst, an der Peripherie, in der Seehöhe von 10 m aufgestellt, welche mit Thermometer und Regenschirm ausgerüstet ist.

Das Personal des Observatoriums besteht aus dem Leiter und zwei Beamten. Die Stadtstation hat zwei Beobachter.

Das Observatorium veröffentlicht alltäglich einen Wetterbericht, welcher allen Häfen an der jugoslavischen Adria und einigen Städten im Inlande telegraphiert wird. Durch den Radio-Sender Beograd-meldungen des Observatoriums mit denjenigen der anderen jugoslavischen meldenden Stationen um 0815, 1415 und 2015 emittiert. Durch das Observatorium wird dem Hafen Split alltäglich das Mittags-zeitsignal gegeben. Ein Wetterbericht wird ausserdem in den hiesigen Tageszeitungen regelmässig veröffentlicht.

Indem durch die Sendung dieser Veröffentlichung an die meteorologischen und verwandten Anstalten diese junge Institution mit ihnen in engere Verbindung tritt, wird somit auch der Wunsch nach einem regelmässigen Publikationen-Austausche ausgesprochen.

SPLIT, im Hebeste 1929.
